

RENT Class Design

1. Create Initial Design Classes

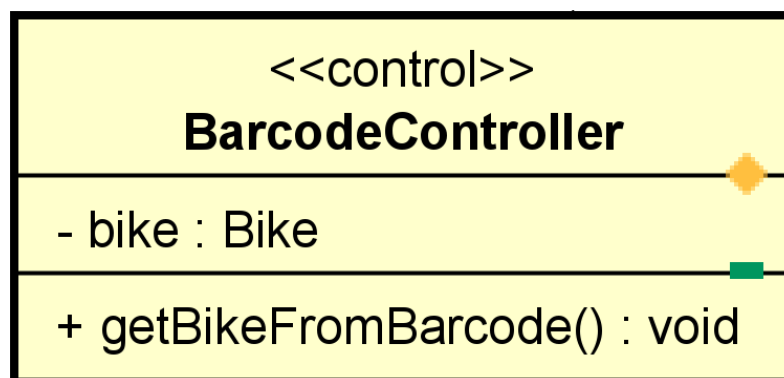

2. Define Relationships Between Classes

3. Class Design

3.1. Class “BarcodeController”

Attribute

#	Name	Data type	Default value	Description
1	bike	Bike	NULL	The result of barcode searching

Operation

#	Name	Return type	Description
1	getBikeFromBarcode	void	Get bike using barcode from DockList

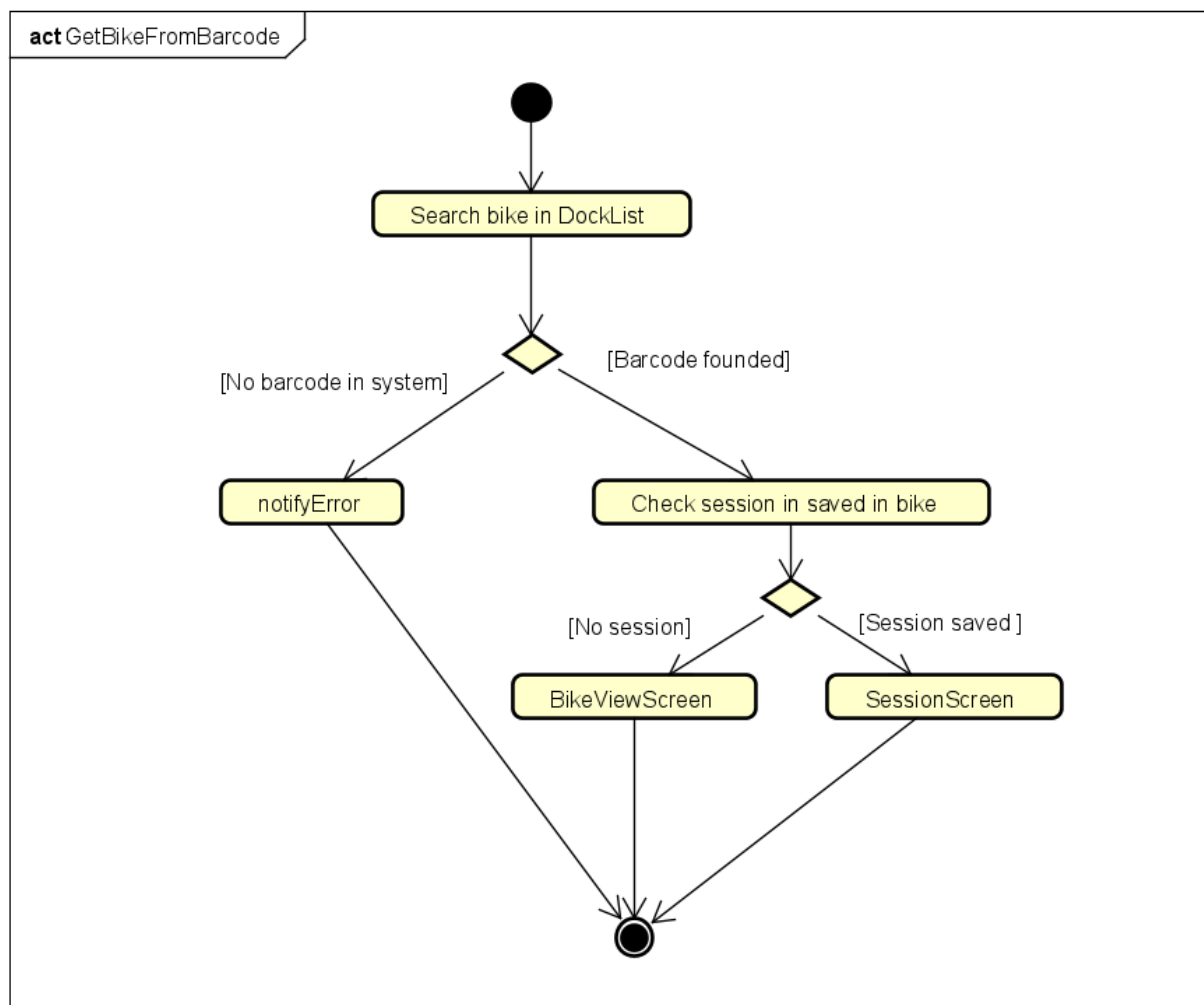

Parameter:

None

Exception:

None

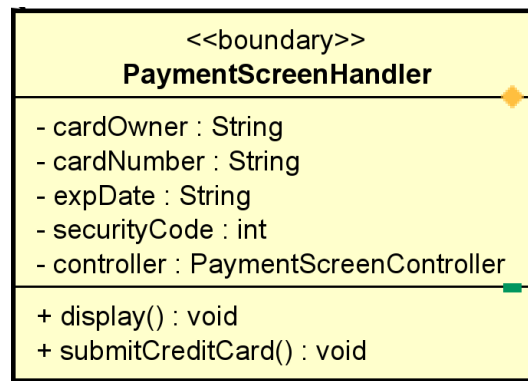

Method

State

None

3.2. Class “PaymentScreenHandler”

Attribute

#	Name	Data type	Default value	Description
1	controller	PaymentScreenController	NULL	Controller for this screen
2	cardOwner	String	Empty	Card owner
3	cardNumber	String	Empty	Card number
4	expDate	String	Empty	Expired Date
5	securityCode	Int	Empty	Security Date

Operation

#	Name	Return type	Description
3	display	void	Display screen
4	submitCreditCard	void	Send card to next handler

Parameter:

None

Exception:

None

Method

None

State

None

3.3. Class “PaymentScreenController”

<<control>> PaymentScreenController	
- card : CreditCard	
+ createCard(cardOwner : String, cardNumber : String, expDate : String, securityCode : int) : void	

Attribute

#	Name	Data type	Default value	Description
1	card	CreditCard	NULL	Card for payment

Operation

#	Name	Return type	Description
1	createCard	void	Create an instance of CreditCard

Parameter:

cardOwner – card owner
cardNumber – card number
expDate – expired date
securityCode – security code

Exception:

None

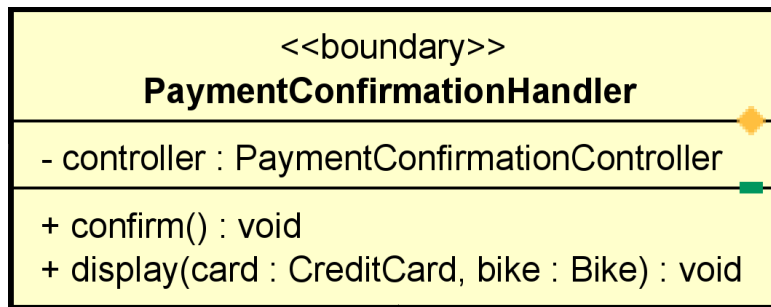

Method

None

State

None

3.4. Class “PaymentConfirmationHandler”

Attribute

#	Name	Data type	Default value	Description
1	controller	PaymentConfirmationController	NULL	Controller for this screen

Operation

#	Name	Return type	Description
1	display	void	Display screen
2	confirm	void	Move to next screen

Parameter:

None

Exception:

None

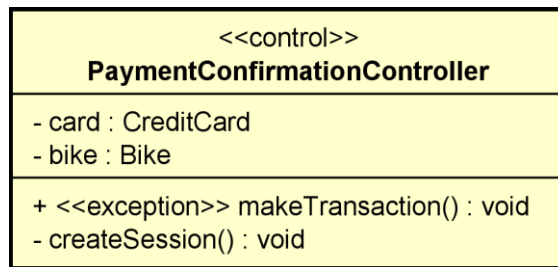

Method

None

State

None

3.5. Class “PaymentConfirmationController”

Attribute

#	Name	Data type	Default value	Description
1	card	CreditCard	NULL	Card for payment
2	bike	Bike	NULL	Bike for renting

Operation

#	Name	Return type	Description
1	makeTransaction	void	Make transaction
2	createSession	void	Create new Session

Parameter:

None

Exception:

InvalidCardException

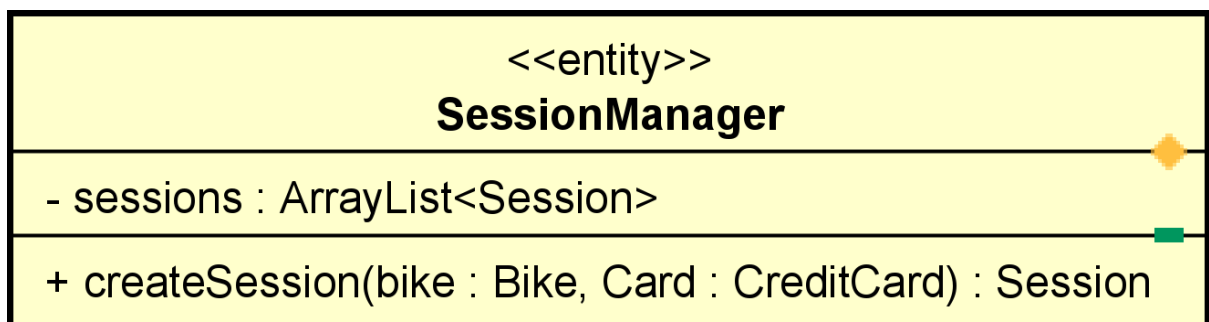

NotEnoughBalanceException

InternalServerErrorException

Method

None

3.6. Class “SessionManager”

Attribute

#	Name	Data type	Default value	Description
1	sessions	ArrayList<Session>	Empty ArrayList	List of sessions

Operation

#	Name	Return type	Description
1	createSession	Session	Create new session and add to list

Parameter:

bike – the rented bike

card – the used card

Exception:

None

Method

None

4. Class Diagram
